

AI Agent Insure

Customer Service Product Guide: Model & Data Security Insurance

1. High-Level Summary

Focuses on protecting training data, embeddings, models, and endpoints from security threats and misuse.

2. Who This Product Is Appropriate For

- Organizations with proprietary models trained on sensitive or high-value data.
- Enterprises exposing AI capabilities via APIs to internal teams or external customers.
- Teams concerned about prompt injection, model exfiltration, or data leakage.

3. What This Product Covers

- Incidents involving prompt injection leading to data exposure or malicious behavior.
- Unauthorized model access, copying, or fine-tuning by internal or external actors.
- Data poisoning events that corrupt or bias model behavior.
- Breaches of embedding stores, feature stores, or vector databases holding sensitive data.

4. Optional Coverage Add-ons

- Enhanced incident-response support for AI-specific breaches.
- Security posture assessments aligned with AI model lifecycle stages.
- Add-ons aligned with sector-specific regulations (e.g., healthcare, finance).
- Joint-response playbooks co-designed with the customer's security team.

5. Common Exclusions (High-Level)

- Basic IT or network events unrelated to AI models or data.
- Incidents arising from ignoring known, documented critical vulnerabilities.
- Lack of any baseline access control or authentication mechanisms.
- Use of unlicensed data sources that violate law or contractual terms.

6. Example Customer Scenarios & Positioning Tips

- A clever prompt causes an LLM to leak internal system prompts and configuration details.
- A stolen API key allows an attacker to extract large portions of a fine-tuned model's behavior.
- Poisoned training data subtly shifts model decisions, causing business and reputational damage.

7. Common Caller Questions & Suggested Discovery Prompts

- What types of models do you operate (foundation models, fine-tuned, custom)?
- Do your models process or learn from sensitive or regulated data?
- How are model endpoints secured and monitored?
- Have you performed any red teaming or adversarial testing on your AI systems?

8. Key Data to Capture During the Call

When discussing this product with a prospective customer, Customer Service Agents should aim to capture:

- The caller's role and decision-making authority.
- The types of AI systems or workflows currently in use or planned.
- Any recent or historical incidents or near-misses involving AI.
- Regulatory or contractual constraints the customer operates under.
- Business processes that would be most impacted by AI failure or misbehavior.
- Any existing insurance coverage the customer already has for technology or cyber risk.
