

AI Agent Insure

Insurance for Agentic AI Builders

AI Infrastructure & Ops Protection

Overview

Covers the operational backbone of AI systems, including vector databases, embedding pipelines, model-serving stacks, retrieval augmentations, and orchestrated agent workflows.

Key Coverage Details

- Protects against outages in mission-critical AI services and inference layers.
- Covers corruption of embeddings, vector stores, and knowledge repositories.
- Mitigates cascading failures caused by RAG breakdowns or multi-agent orchestration faults.

Real-World Scenarios in Agentic AI Environments

- A corrupted vector index causes the RAG system to deliver outdated or incomplete answers.
- A model deployment failure halts a customer support AI agent for several hours.
- An AI orchestrator misroutes tasks, causing multiple dependent agents to stall.
