

AI Agent Insure

Insurance for Agentic AI Builders

Model & Data Security Insurance

Overview

Protects foundational AI assets including training data, embeddings, fine-tuned models, and inference endpoints.

Key Coverage Details

- Coverage for prompt injection attacks and training data poisoning.
- Protection against model theft, unauthorized fine-tuning, and API exploitation.
- Safeguards embedding stores, vector DB breaches, and data leakage vulnerabilities.

Real-World Scenarios in Agentic AI Environments

- A malicious user injects adversarial prompts that expose internal system data.
- A competitor steals an exported fine-tuned model through an unsecured endpoint.
- A vector database breach exposes confidential embeddings.
