

AI Agent Insure

Customer Service Product Guide: AI Infrastructure & Ops Protection

1. High-Level Summary

Protects the operational backbone of AI systems: pipelines, vector stores, model-serving infrastructure, and orchestration layers.

2. Who This Product Is Appropriate For

- Teams running production LLM, RAG, or agent platforms that support business-critical use cases.
- AI platform providers supporting multiple product teams or external customers.
- Companies whose customer support, analytics, or automation flows depend on AI uptime.

3. What This Product Covers

- Losses associated with prolonged AI system outages or degraded performance.
- Coverage for corruption of critical AI data stores such as embeddings or vector indexes.
- Protection for failures in orchestration platforms that route tasks between agents or services.
- Coverage for misconfigurations leading to widespread AI service disruption.

4. Optional Coverage Add-ons

- Tiered uptime coverage based on defined SLAs and criticality levels.
- Add-on for expedited recovery and specialist engineering support.
- Coverage tailored to multi-region or multi-cloud deployments.
- Optional benchmarking and resilience assessment services.

5. Common Exclusions (High-Level)

- Planned downtime or maintenance windows.
- Outages caused by upstream cloud provider failures beyond a negotiated scope.

- Incidents resulting from unsupported or experimental deployments not disclosed to underwriting.
- Purely cosmetic or non-material service degradations.

6. Example Customer Scenarios & Positioning Tips

- A corrupted vector index causes incorrect answers across all customer-facing AI assistants.
- A misconfigured model routing layer sends production traffic to a test model with outdated data.
- An orchestration failure prevents agents from executing key workflows during a critical sales event.

7. Common Caller Questions & Suggested Discovery Prompts

- Which business processes depend on your AI infrastructure being available?
- Do you operate your own models, or rely on third-party APIs, or both?
- How do you monitor the health and performance of your AI stack today?
- Have you experienced outages or performance incidents in the last 12–18 months?

8. Key Data to Capture During the Call

When discussing this product with a prospective customer, Customer Service Agents should aim to capture:

- The caller's role and decision-making authority.
- The types of AI systems or workflows currently in use or planned.
- Any recent or historical incidents or near-misses involving AI.
- Regulatory or contractual constraints the customer operates under.
- Business processes that would be most impacted by AI failure or misbehavior.
- Any existing insurance coverage the customer already has for technology or cyber risk.
