

AI Agent Insure

Customer Service Product Guide: Synthetic Data & Dataset Integrity Coverage

1. High-Level Summary

Covers risks associated with dataset quality, synthetic data pipelines, labeling, and training integrity.

2. Who This Product Is Appropriate For

- Teams heavily reliant on synthetic data for training or augmentation.
- Organizations curating large internal datasets for fine-tuning or supervised learning.
- Vendors offering synthetic data products or dataset-as-a-service.

3. What This Product Covers

- Losses related to biased or low-integrity synthetic data affecting business outcomes.
- Coverage for mislabeled or corrupted datasets that degrade model performance.
- Protection against regulatory or contractual issues arising from dataset sourcing.
- Support for forensic analysis of dataset lineage and contamination sources.

4. Optional Coverage Add-ons

- Bias and fairness assessment add-ons for high-impact decision systems.
- Dataset lineage documentation and audit support.
- Coverage tailored to synthetic data generation tooling providers.
- Co-branded research on dataset quality improvements.

5. Common Exclusions (High-Level)

- Use of clearly non-compliant data sources without due diligence.
- Deliberately fabricated metrics or misrepresented dataset quality.
- Datasets entirely outside the declared AI product portfolio.

- General business decisions unrelated to the model's use of the dataset.

6. Example Customer Scenarios & Positioning Tips

- A synthetic dataset introduces demographic bias into a hiring or lending model.
- Mislabeled event logs lead to poor anomaly detection and missed incidents.
- A regulator questions the provenance of training data behind a high-stakes AI system.

7. Common Caller Questions & Suggested Discovery Prompts

- Do you use synthetic data, real-world data, or a combination for training?
- How do you track dataset versions, lineage, and labeling quality?
- Are any of your AI decisions subject to fairness or explainability requirements?
- Have you ever had to roll back a model due to data-quality issues?

8. Key Data to Capture During the Call

When discussing this product with a prospective customer, Customer Service Agents should aim to capture:

- The caller's role and decision-making authority.
- The types of AI systems or workflows currently in use or planned.
- Any recent or historical incidents or near-misses involving AI.
- Regulatory or contractual constraints the customer operates under.
- Business processes that would be most impacted by AI failure or misbehavior.
- Any existing insurance coverage the customer already has for technology or cyber risk.
