Insurance for Agentic AI Builders

Synthetic Data & Dataset Integrity Coverage

Overview

Ensures the quality, legality, and reliability of both synthetic and real-world datasets used to train AI models.

Key Coverage Details

- Covers contamination, corrupted labels, biased generation pipelines, and data drift.
- Includes dataset lineage verification and compliance monitoring.
- Covers regulatory violations related to data sourcing.

Real-World Scenarios in Agentic AI Environments

- A synthetic dataset introduces bias that causes unfair model decisions.
- A mislabeled training set leads to incorrect AI classifications.
- Regulators penalize a company for unknowingly using restricted data.
